

October 7, 2014

Greetings,

BroadSoft is pleased to announce that the Sonus 1000/2000 series has been formally validated with BroadWorks as a FXS access gateway. The device model(s) listed below have been validated as interoperable with the BroadWorks SIP interface. Configuration details and any issues or limitations identified during the interoperability testing are documented in the BroadSoft Partner Configuration Guide (PCG) *PartnerConfigGuide Sonus SBC 1000-2000 Access*. The PCG is available to BroadSoft customers on the BroadSoft Xchange website, <http://xchange.broadsoft.com>.

BroadSoft validates that the device interoperates with the BroadWorks SIP interface. BroadSoft does not validate qualitative aspects of the device, capacity, or other device capabilities outside the scope of the SIP signaling interface.

The validation covers the Sonus version(s) and BroadWorks release listed below. Other versions tested previously are documented in the PCG.

Sonus SBC 1000, SBC 2000 version 4.1.0 \*  
BroadWorks Release 20.sp1 \*\*

\*This validation also applies to all subsequent compatible maintenance releases to this device version.

\*\*Test results are observed as compatible with BroadWorks Releases 19.0, 19.sp1, 20.0.

Best Regards,
