

Sonus

THE KEY TO SECURING REAL-TIME COMMUNICATIONS

Sonus ensures real-time communications are delivered safely and securely across disparate networks.

What Sonus Solutions Do:

Secure and link voice and video communications

Enable new collaboration capabilities like Unified Communications

Strengthen VoIP and video sessions by making them robust and reliable

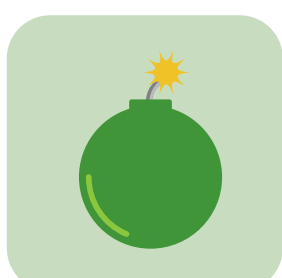

Translate network connections into one language

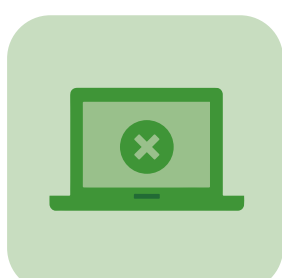

Protect from toll-fraud and DoS attacks

With Sonus, Your Company Avoids...

Service Attacks

Service Threats and Fraud

Spoofing

Sonus enables you to have trouble-free meetings, chats and connections, while avoiding lost profit and time.

Trouble has New Targets: Your Mobile, Social, and Cloud Technologies.

Mobile

VoLTE—Voice over LTE—subscribers are set to almost double in the next 3 years, with over 2 billion smartphone users around the world in 2015.

With all those potential Internet calls, 64% of web servers don't offer adequate protection.

Social

60% of all social media is accessed through tablets or smartphones. When your employees can't have real-time chats with potential customers, or engage on other types of social media, up to 25% of potential productivity is lost.

Cloud

Cloud professionals in the public and private sectors say data security is a critical concern. 54% of Unified Communications tech professionals consider data attacks the number one security threat.

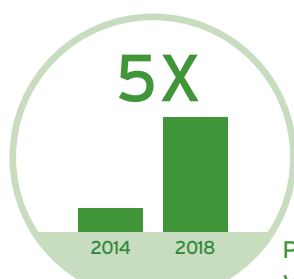

Mobile

Social

Cloud

Projected VoLTE growth by subscription

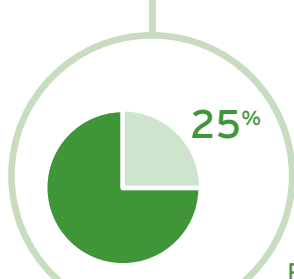

Social media penetration, globally

UCaaS expected revenue in 2019

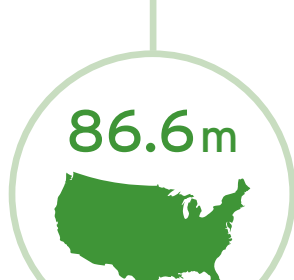

Web servers not supporting TLS protection

Potential productivity lost due to limited social technology

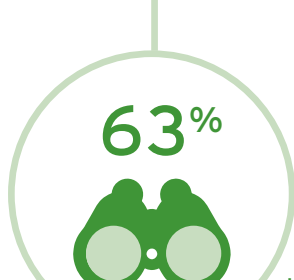

WebRTC has already surpassed one billion endpoints

U.S. population accessing video once a month, on a mobile device

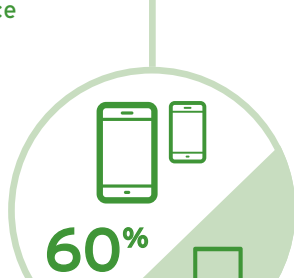

UC applications enabled with video conferencing

UC network managers lack information to troubleshoot

Mobile penetration, globally

Social media accessed by smartphones & tablets

Tech decision-makers consider data attacks the #1 security threat to UC

Purpose-Built Portfolio to Bring Intelligence to Real-Time Communications
